

Southern Blacklands IPM Update – Volume 1, Issue 9

--November 20, 2023--

Matthew Matocha, IPM, Extension Program Specialist

As we continue to move into the fall/winter, I just wanted to remind folks that I am offering scouting services for wheat. Below is a handout I've used in the past which gives my contact information as well as crops scouted in the Southern Blacklands. Please contact me if you have questions or are interested in participating in the IPM scouting program this winter.

I've also included below how you may sign up for our IPM Audio Updates beginning this coming spring.

Thank you and have a happy holiday season!

Matt Matocha

---Southern Blacklands IPM Program---

Matthew Matocha, Extension Program Specialist, IPM Program, covering **Bell, Williamson, Milam, and Robertson Counties.**

Email: Matthew.matocha@ag.tamu.edu

Cell: 979-450-5615

Office: located at Stiles Farm Foundation office

The Texas A&M AgriLife Extension Service IPM Program consists of Extension Agents in IPM and Extension Program Specialists in IPM in an effort to serve growers in the different areas of the state. My position in the IPM Program was designed to cover the counties in the Southern Blacklands. My role in this position is to offer scouting services for pests in the major crops in the area I serve. This includes scouting in wheat, cotton, corn, sorghum, and (pastures if needed).

Our IPM Audio updates are continuing to be published. If you would like to listen to them there are two ways, the first being visiting the Sound Cloud Page (<https://soundcloud.com/user-766365640-259391064>) and looking for the BUGC or Blacklands Audio files. The second way to receive these updates is by text message, and you can sign up to have them sent to you via text at <https://www.texasinsects.org/agriculture-audio-updates-home.html>.
